DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 2 and 9-21 drawn to a memory device having a sense amplifier driver and a method of outputting an enable signal for enabling a sense amplifier, classified in class 365, subclass 205.
 - II. Claims 3-8, drawn to a specific sense amplifier driver having N inverters, classified in class 365, subclass 189.08.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the memory device of Group I does not require the particulars of the sense amplifier driver circuit of Group II such as N inverters, a transistor and a capacitor having specific connections. The subcombination has separate utility such as driving a sense amplifier of different circuits from the memory device of Group I.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, different

search and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
